Insights

1. Overtime is the single strongest attrition driver in this dataset. Employees working overtime leave at a rate of 29.2% compared to just 5.0% for those without overtime, making it nearly 6 times more likely for overworked staff to exit the organization.
2. Employees reporting Bad work-life balance have the highest attrition at 26.7%, while those with Better balance show the lowest at 9.7%, confirming that work-life balance is a critical retention factor in healthcare settings.
3. Low job satisfaction drives the highest attrition at 15.8% compared to 8.5% among Very High satisfaction employees, indicating that employee engagement and satisfaction program could significantly reduce turnover.
